DATA JOURNALISM & STORYTELLING

Transition & Order of Story Pieces

Topic: Unequal PM2.5 Exposure in Europe — a Martini Glass structure: author-driven findings → reader-driven exploration.

The story progresses through Granularity, Comparison, and Spatial transitions, guiding the audience from a Europe-wide overview to regional analysis and country-level investigation.

Published Example

New York Times — This presentation draws inspiration from New York Times climate visual storytelling, particularly in its use of granular data, comparative views, and spatial transitions to guide the narrative.

Key Takeaway

Ordering findings with intentional transitions builds a logical arc — from broad context to specific insight — while guiding navigation through the visual story.
